

Delema G. Deaver Health Education Center

EDUCATIONAL. ENGAGING. FUN!

The Delema G. Deaver Health Education Center (HEC) at Lankenau Medical Center is an educational and interactive learning center designed to promote health and well-being. Through eye-catching and engaging technology, the Center strives to empower its visitors to learn more about their body and how to keep it healthy and safe.

The HEC provides its visitors with a creative, hands-on learning environment that supplements the health education efforts of schools, families and community organizations. The many program offerings also support school health and science curriculum requirements and meet the PA standards for science, health safety and physical education.

Programs are offered **free of charge** in both in-person and virtual formats covering the areas of general health and body systems, nutrition and fitness, bullying prevention, substance abuse prevention, and family life.

Delema G. Deaver Wellness Farm at Lankenau Medical Center

Planting the seeds of good health!

At Lankenau Medical Center, we recognize the connection between nutrition and wellness. In collaboration with Greener Partners, we are one of only a few hospitals nationwide to take the progressive step of planting and maintaining a year-round organic farm on-site. Our goal is to harness the power of locally grown food to strengthen our community's health. The farm also serves as a living outdoor classroom that connects learners to the source of healthy food, promotes healthy eating and investigates the science behind the agriculture.

FIELD TRIP PROGRAMS

Young Explorers | Grades Pre K-3 75-90 minutes

Engage the five senses to build and enhance observation skills through an exploration into the secret world of plants exploring their hidden side. Discover and taste edible plant parts, including seeds, leaves and roots and learn why and how eating plants are part of a healthy diet. Participants will learn how and what plants need to grow from seed to plate. Program includes a food demonstration of a healthy recipe using ingredients from the farm!

Living Soil and Compost | Grades 2-8 75-90 minutes

It's not dirt! Many organisms and decomposers are part of the soil food web, and impacts all life on earth. Together we will explore how compost operates as the farm's own recycling system, and compare the composting process to other forms of recycling. Participants will use the farm as a living classroom to take a closer look at the hidden world of soils and compost, and discover how healthy soil is the foundation for healthy bodies and a healthy planet!

Seasonality and Sustainability | Grades 3-12 90 minutes

Step into the shoes of a farmer and learn what seasonality and the climate of PA means for agriculture. Together we will trace the food in grocery stores and markets back to its origin on a farm. Participants will discover what crops are in season in the region and the variety of food that can be grown close to home. We will explore the many parts of our complex food system and learn what sustainable options exist for producers and consumers. Participants will have the opportunity to use their senses to explore the themes in our living learning lab and get a true farm-to-fork recipe on the farm!

Food Justice | Grades 6-12 90 minutes

Participants will explore our food system through the lens of equity. Through farm-based activities like harvesting, planting and tasting, we will explore food access, community growing practices, and the environmental and public health impacts of our food system. Together, we will build an understanding of how a more just and equitable food system makes our communities healthy, strong and resilient.
